KPMG ABIVAX

Steering Committee RFP Analysis Review

Phase 3-Consultation process and preparation

Thursday 5th February 2026

KPMG. Make the Difference.

Agenda

01	Introduction	03
02	Executive summary	07
03	Short-list arbitration	17
04	Next Steps	19
05	Appendix	22

Introduction

01

Reminder of our methodology

	13 October – 03 November **Business and IT Diagnostics**	03 November – 15 December **Requirements identification and request for proposal**	15 December – 23 March **Consultation process and preparation**
Objectives	▪ **Carry out a complete diagnostic** of the business processes, in terms of workflows, management rules, organization and scope covered by the IS. ▪ Diagnose **the functional use of the current ERP** system	▪ **Collect and prioritize** the **business requirements** and identify **non-functional requirements** Produce the **RFP document** (RFP = Request for Proposal) ▪ Identify a **list of candidate ERP** solutions to be included in the RFP process ▪ Define **selection criteria for later evaluation** of the tenderers offers (software vendors and associated system integrators)	▪ Manage the **request of proposal process** ▪ **Analyze the answers** with standard grids and help reduce the number to 3 competitors (V1 analysis) ▪ Organize **interviews and demonstrations with 3 editors / integrators** and evaluate them ▪ Provide a **complete report** (v2 analysis) to facilitate the decision process with **functional and financial analysis** ▪ Provide **recommendations on organization and governance** from a master data management perspective
Modalities	▪ **Kick Off meeting** ▪ **3 interviews** with operational managers (Finance, Procurement, IT) to conduct **the business analysis** ▪ **1 wrap-up meeting** with project team and management board to **present the analysis results**	▪ **3 workshops** with operational managers (Finance, Procurement, IT) to collect **business requirements** ▪ **2 workshops** with finance team to **determine the right model** between ERP and ERP + best of breed solutions ▪ **Internal work** to build the RFP dossier ▪ **1 review / validation** workshop to validate RFP document ▪ **1 workshop** to define **the criteria and the analysis grid**	▪ **2 workshops** to work on **organization and governance** from a master data management perspective ▪ **Internal work** to conduct the analysis ▪ **1 workshop** to review analysis and **reduce to 3 actors** ▪ Leading **demonstrations meetings with 3 competitors** (1 day per competitor) ▪ **1 management meeting** to help **ERP's final choice**
Deliverables	▪ **Launch meeting document** ▪ **Analysis report**	▪ **Business requirements** with prioritization ▪ **RFP document** ▪ **List of ERP** to be included in the RFP process ▪ **Criteria grid** for tenderers offer assessment	▪ **Recommendations on organization and governance** ▪ **Analysis report** v1 and V2 ▪ **User case studies** for demonstrations and evaluation form ▪ **Final presentation for the management board**

Project progress overview

Project status

October 2025 | November 2025 | December 2025 | March 2026

- Business and IS diagnostics
- Requirements identification and Request for proposal drafting
- Consultation process and preparation

Phase 2

- RFP conception
- NDA sending and signature
- Submission of the RFP to vendors

Phase 3

- Analysis report
- Demonstration sessions
- Workshop on data organization and governance

In Launch | Started | In progress | To validate | Validated

Project Health Summary

Global Status

Trend

Points of attention & alerts

- We've received all RFP responses from the bidders. We will share the presentation on Thursday 3rd February, and present it to on 5th February

Highlights

- Phase 1: 3 interviews
- Synthesis Meeting phase 1
- Phase 2: 5 interviews
- **Responses from bidders : 4/4**
- **Demonstration inputs have been sent to bidders**

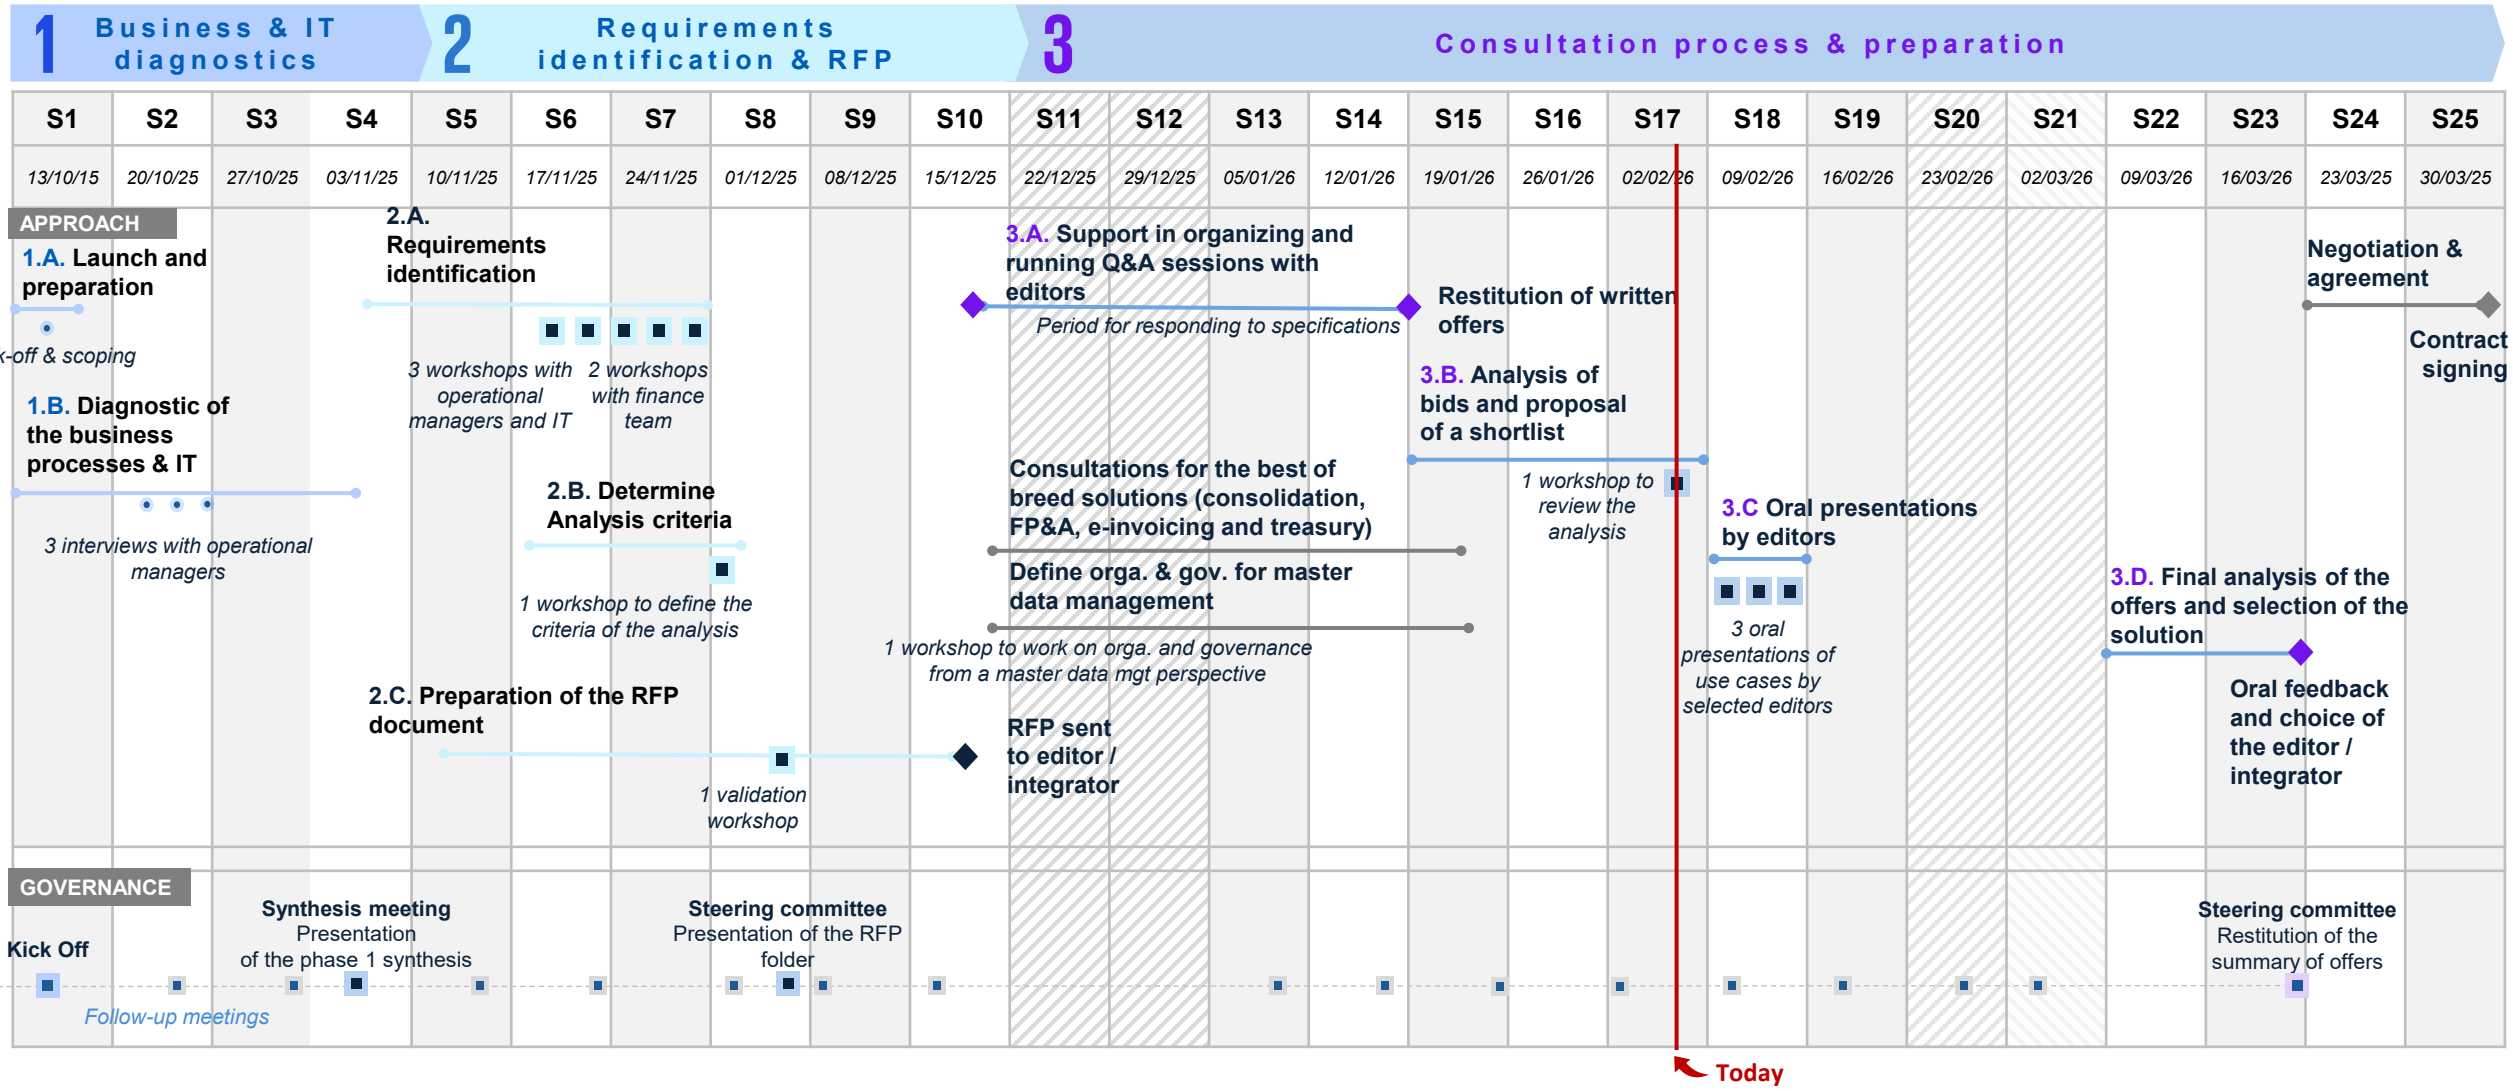
Next steps

- Demonstration sessions :
  - **KPMG - SAP**: Tuesday 10th February
  - **NSI – Microsoft**: Wednesday 11th February
  - **Oracle – Netsuite**: Thursday 12th February
  - **Kardol – Sage**: week of 23rd February
- Schedule the data organization & governance workshop
- Prepare the demo evaluation form to be completed during the demonstration sessions

Arbitration Requests

- Select and confirm the shortlisted bidders to invite to the demonstration sessions

Global planning



Executive summary analysis

02

We have received 4 answers covering solution & integration (1/2)

Applicants who answered

SAP S/4 HANA Public — KPMG

ORACLE NetSuite — ORACLE

Sage X3 — GROUPE kardol

Microsoft Dynamics 365 Finance & Operations — nsi A CEGEKA COMPANY

Applicants who did not answered

workday

We have received 4 answers covering solution & integration (2/2)

		SAP S/4 HANA Public	ORACLE NetSuite	Sage X3	Microsoft Dynamics 365 Finance & Operations
Editor	Year of creation	1972	1977	1981	1976
	Activity and expertise	CRM, ERP, Supply chain, ESG	Cloud, ERP	ERP	ERP / CRM, OS, Office software, Cloud (Azure)
	Workforce	107 000	162 000	13 900	181 000
	Certifications	ISO27001 and SOC2	ISO27001 and SOC2	ISO 27001, ISO 9001, HDS	SO27001, NIST, SOC
	Revenue/Turnover	31,2 B €	57,4 B €	2,62 B €	245 B €
		KPMG	ORACLE	GROUPE kardol	nsi A CEGEKA COMPANY
Integrator	Year of creation	1897	1977	1981	1993
	Workforce	275 000	162 000	280	2 000
	Revenue/Turnover	38,4 B €	57,4 B €	65 M €	94 M €
	Net income	-	12,44 B €	-	-
	Team locations	All over the world	All over the world	France	More than 20 countries including France and US

The 4 answers contains the relevant information

	SAP S/4 HANA Public – KPMG	Oracle NetSuite – Oracle	Sage X3 – Groupe Kardol	Microsoft Dynamics 365 Finance & Operations – nsi

IT solution coverage	• **ERP:** SAP S/4HANA Cloud (public edition)
	• Options :
	  • **Middleware:** SAP integration suite
	  • **E-invoicing:** SAP Document and Reporting and Compliance
	  • **BI solution:** SAP Business data cloud
		• **ERP:** NetSuite
		• Options:
		  • **Middleware:** NSIP Oracle Netsuite middleware
		  • **E-invoicing:** NetSuite + Avalara
		  • **BI solution:** NetSuite Analytics Warehouse
			• **ERP:** Sage X3
			• Options:
			  • **Middleware:** EAI Qlik Talend
			  • **E-invoicing:** Sage Approved Platform (Sage PA)
			  • **BI solution:** BI – SEI (Sage Enterprise Intelligence
				• **ERP:** D365 Finance and Operations (D365 FO)
				• Options:
				  • **Middleware:** N/A, managed with API
				  • **E-invoicing:** N/A Still evaluating the selected partner for French scope (Chorus, ExFlow, etc.).
				  • **BI solution:** Microsoft Fabric/Power BI

References	• **Doctolib:** HealthtechSaaS • **H2air:** Independent renewable power producer • **Cerbaresearch:** Clinical trial laboratory services	• **Ennov:** Life sciences • **ITBMed:** Biotech • **EFESO:** Industrial performance consulting	• **Proxis:** Water treatment, perfumery, biotech • **SVR:** Dermocosmetics/skincare products • **Sebia:** equipment and reagents for clinical screening	• **Eurofins:** bioanalytical testing • **Ascendis Pharma:** Biopharma • **Inovet:** manufacturing of animal medicines
Infra	• SaaS public cloud application	• SaaS public cloud application, hosted in distributed Oracle data centers	• Private Cloud in the sense that they provide dedicated infrastructure for each client	• Saas public cloud solution running on Azure
General coverage	99%	100%	98%	98%
Standard coverage	98%	79%	96%	83%
Cost of Build	€725K	€440K	€587K	€538K
Overall cost over 3 years	€1.38M	€1M	€1.57M	€1.2M
Average daily rate	€945	€1134	€1145	€1094

We have analyzed the answers through the defined criteria & weights (1/2)

Functional coverage (30%)

- Global functional coverage
- Functional coverage by domain

Budget (20%)

- Total cost over 10 years
- License
- Hosting
- Maintenance
- Deployment cost

Architecture / technical (15%)

- Relevance of proposed solution
- Scalability of the solution
- Configuration and development options
- Reversibility
- Editor's IT roadmap
- Integrator/ editor relationship (RACI dev., etc.)

Associated contract (5%)

- Opinions lawyers / GC intern
- Ask for contract models

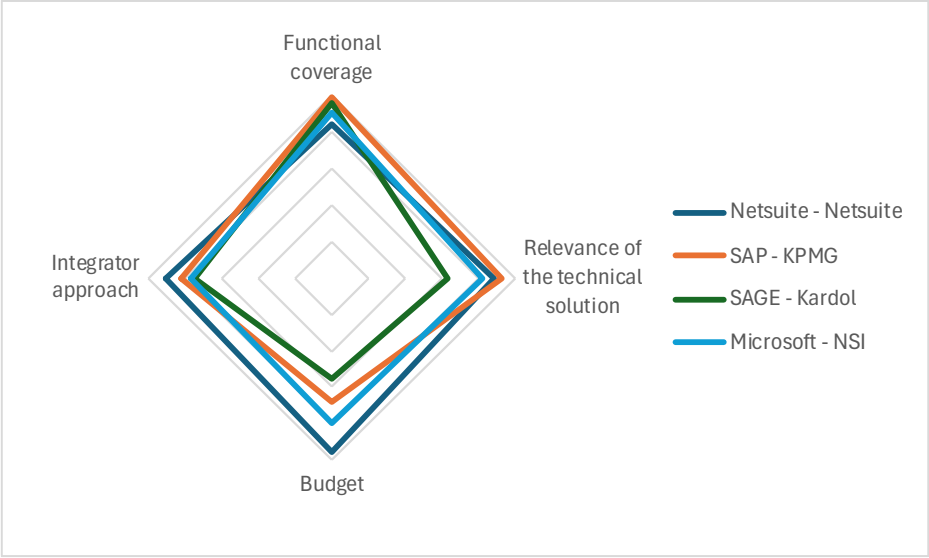
Integrator approach (30%)

- Project approach
- Complexity of integration
- Planning
- References
- Financial health
- Project team
- TMA & Support
- Project tools

We have analyzed the answers through the defined criteria & weight (2/2)

Overall ranking (details per criteria in next pages & appendix)

#		
1	ORACLE NetSuite	3.39/4
2	SAP S/4 HANA Public	3.26/4
3	Microsoft Dynamics 365 Finance & Operations	3.14/4
4	Sage X3	2.84/4



Comments

- **NetSuite:** Best implementation approach and client understanding, with the vendor acting as the integrator. However, the overall score is impacted by functional coverage less deep than SAP (80% standard)
- **SAP:** Near-100% standard functional coverage, which is expected given SAP's enterprise-grade capabilities. Strong and effective implementation approach that clearly takes Abivax's context into account. Pricing is the second highest, mainly on build costs with the highest volume of days
- **Microsoft:** A balanced proposal but missing a part of the optional scope with no e-invoicing solution offered.
- **Sage:** Good functional coverage, but the score is pulled down as it is the most expensive option for Abivax and the implementation approach lacks precision and tailoring to Abivax's context.

Financial analysis - Overall costs over the years (1/3)

Comparison based on the firm scope, best of breed excluded (different scope on the offers):

	Sage *Kardol*	Microsoft *NSI*	Netsuite *Oracle*	SAP *KPMG*
Overall cost over 3 years	1 350 742,00 €	1 130 671,24 €	893 131,00 €	1 242 847,30 €
Overall cost over 5 years	1 859 870,00 €	1 531 871,80 €	1 195 165,00 €	1 588 013,30 €
Overall cost over 10 years	3 132 690,00 €	2 534 8735,20 €	1 950 250,00 €	2 450 928,30 €

Comparison based on the firm scope + options, best of breed included → Warning: Best of breed scope is not aligned between candidates

	Sage - Kardol	Microsoft - NSI	Netsuite - Oracle	SAP - KPMG
Overall cost over 3 years	1 593 602,00 €	1 213 674,04 €	1 012 545,80 €	1 721 213,30 €
Overall cost over 5 years	2 252 130,00 €	1 663 889,80 €	1 386 563,00 €	2 157 893,30 €
Overall cost over 10 years	3 898 450,00 €	2 789 429,20 €	2 321 606,00 €	3 249 593,30 €

Comparison based on firm scope + options with addition of 15% contingency, 6% increase license rate after Y4, and 35% external support:

	Sage *Kardol*	Microsoft *NSI*	Netsuite *Oracle*	SAP *KPMG*
Overall cost over 3 years	1 809 607,00 €	1 132 897,56 €	1 238 305,80 €	2 069 922,50 €
Overall cost over 5 years	2 528 587,87 €	1 450 455,19 €	1 646 657,78 €	2 546 689,72 €
Overall cost over 10 years	4 739 222,87 €	2 426 842,98 €	2 902 208,82 €	4 012 595,64 €

Comments

- To optimize the comparison, we made as sure as possible to compare identical scopes. Nevertheless, there are some differences regarding functional coverage that may impact the comparison.
- Overall costs are higher for SAGE and SAP, but there is a significant difference between the candidates regarding the options (middleware, e-invoicing and BI) to consider.
- **Decision to be taken** scope of the Best of breeds solution to be included in the financial analysis because of the difference within the answers

Financial analysis – Detailed costs for Build (2/3)

		Sage *Kardol*	Microsoft *NSI*	Netsuite *Oracle*	SAP *KPMG*
Build	Project management	93 620,00 €	74 655,00 €	20 960,00 €	146 700,00 €
	Initialization	69 250,00 €	61 051,25 €	50 640,00 €	5 800,00 €
	Solution design	10 350,00 €	161 789,00 €	16 440,00 €	114 410,00 €
	Solution implementation	230 780,00 €	114 768,15 €	269 240,00 €	246 408,30 €
	Data recovery	19 800,00 €	26 362,00 €	17 120,00 €	- €
	Acceptance	84 400,00 €	14 700,00 €	11 360,00 €	84 100,00 €
	Training	22 500,00 €	41 820,00 €	13 920,00 €	- €
	Production start-up and assistance	38 350,00 €	15 725,00 €	15 760,00 €	109 680,00 €
	Maintenance and user support during the warranty phase	- €	- €	- €	- €
	Reversibility management	- €	- €	6 640,00 €	- €
	Best-of-breed implementation	18 760,00 €		11 440,00 €	341 095,00 €
	Travel expenses	18 000,00 €	18 000,00 €	18 000,00 €	18 000,00 €
	Sub-total "Build" (One-Off)	**605 810,00 €**	**528 870,40 €**	**451 520,00 €**	**1 066 193,30 €**

Total (man days)	**514,5**	**475,16**	**382**	**1075,875**
Integrator's average daily rate	**1 142,49 €**	**1 095,11 €**	**1 134,87 €**	**974,27 €**
Abivax Workload	**863**	**692,5**	**134**	**480**

Comments

- **Build** costs vary significantly by integrator.
  - **Sage** has a 514 days but the highest daily rate, project management is maybe a bit high.
  - **Microsoft** offers a structured cost-to-control balance by having second-lowest build cost, by moderating design & implementation effort and project management costs. However, the analysis highlights an important effort on Abivax workload.E-invoicing is not quoted and caused some difficulties in the comparison.
  - **NetSuite**'s low build costs suggest a fast implementation. It is consistently lower on solution design, implementation, acceptance & training.
  - **SAP** costs are mainly driven by heavy volume of days for project management and implementation with a lower daily rate because of the use of offshore

Financial analysis – Detailed costs for Run (3/3)

		Sage *Kardol*	Microsoft *NSI*	Netsuite *Oracle*	SAP *KPMG*
Run	SAAS rent (annual)	242 364,00 €	122 372,88 €	145 899,60 €	161 090,00 €
	SaaS rent (annual unit basis)	*999,75 €*	*689,19 €*	*779,49 €*	*348,44 €*
	SaaS rent (monthly basis)	*11 830,33 €*	*10 197,74 €*	*9 159,00 €*	*13 424,17 €*
	SaaS rent (annual basis)	*141 964,00 €*	*97 865,28 €*	*109 908,00 €*	*115 333,00 €*
	Best of Breed SaaS rent (annual basis)	*74 700,00 €*	*2 613,60 €*	*23 935,80 €*	*45 757,00 €*
	Hosting subscription (annual)	*25 700,00 €*	- €	- €	- €
	Other costs	- €	*21 894,00 €*	*12 055,80 €*	- €
	TMA (annual)	86 900,00 €	102 735,00 €	41 109,00 €	57 250,00 €
	Support (annual basis)	*22 000,00 €*	*37 560,00 €*	*21 257,40 €*	*14 400,00 €*
	TMA rent (annual basis)	*64 900,00 €*	*65 175,00 €*	*19 851,60 €*	*42 850,00 €*
	Other support / maintenance services	- €	- €	- €	- €
	Sub-total "Run" Saas (annual)	**329 264,00 €**	**225 107,88 €**	**187 008,60 €**	**218 340,00 €**
	Sub-total "Run" Saas (5 years)	**1 646 320,00 €**	**1 125 539,40 €**	**935 043,00 €**	**1 091 700,00 €**

Comments

- **Run** costs differences are mainly driven by lensing & support/TMA assumptions, but there are some optimization to work on regarding potential discounts
  - **Sage** high-cost is due to private cloud SaaS subscriptions and support/TMA levels, suggesting a support-intensive operating model.
  - **Microsoft** has mid-range run costs with a 10% discount, indicating a balanced support & licensing model that allow high scalability.
  - **NetSuite** low run cost reflects a lean SaaS and support footprints with limited BoB rent cost & maintenance layers. It is highlighting a potential strong long-term cost efficiency, but they already proposed a generous discount of 29% compared the others with no discount or only 10% for Microsoft
  - **SAP** has controlled run costs compared to Build phase. It is showing the solution benefits from stable and predictable operating costs.

Zoom on cash-out analysis

Cash-out forecast for Abivax												
Editor Implementer		Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	Year 7	Year 8	Year 9	Year 10	TOTAL

Comments

- Cash forecast including applicant's answers + 15% contingency + 6% inflation rate + external costs at 35% of build costs.
- Long-term costs are dominated by run (licenses + TMA), not build: after Year 2–3, recurring costs (OPEX) become the main driver of total cash-out and outweigh initial implementation differences.
- The TCO spread over 10 years is significant (≈ €2.4m to €4.7m) → Lower upfront build cost does not guarantee lower TCO; operating model and licensing strategy are decisive over time.

Zoom on internal workload estimated

Total (man days) with best of breed	514,5	475,16	382	1075,875
Total (man days) without best of breed	497	467,16	372	747,5
Integrator's average daily rate	1 142,49 €	1 095,11 €	1 134,87 €	974,27 €
Abivax estimated Workload (by candidates)	863	692,5	134	480
Ratio Abivax load VS implementer	1,68	1,46	0,35	0,45

Comments

- Applicants have estimated the number of days that Abivax will have to manage internally during the implementation. At KPMG, we normally use a simple abacus to do the overall estimate : Number of days of implementation *2 = ABIVAX Workload.
- Client workload (Abivax) differs materially, implying different demands on internal teams and change capacity depending on the chosen solution.
    - **Sage** and Microsoft are the one getting closer of our *2 abacus
    - **NetSuite and SAP** estimates seem to be really insufficient, to be clarified

Short-list arbitration

03

Proposition of short-list and topics to secure

Overall ranking (details per criteria in next pages & appendix)

#		
1	ORACLE NetSuite	3.39/4
2	SAP S/4 HANA Public	3.26/4
3	Microsoft Dynamics 365 Finance & Operations	3.14/4
4	Sage X3	2.84/4

To eliminate

List of topics to secure with the short-listed candidates:

- **Offer alignment:** Align with the shortlisted integrators on volume assumptions, RACI, and phase deliverables to reconcile major effort variances and ensure proposals are truly comparable.
- **Demo validation:** confirm end-to-end coverage of all required features and use cases
- **TMA operating model:** Confirm the needed delivery location and team time coverage (US or France)
- **Netsuite** : Assess the effort and complexity required to implement requirements not natively supported by the solution and clarify the Abivax workload estimates
- **SAP:** Assess if the proposed solution may push for excessive customization an overly technical (over-engineered) approach and clarify the Abivax workload estimates
- **Microsoft :** Assess if the solution may require excessive customization, addition of best of breed quote for e-invoicing

Next Steps

04

Focus on auditions

Zoom on functional coverage

		Weight Abivax			
Editor response		Must Have	Should Have	Could have	N/A
ST	**Response in standard**	25	15	10	5
SD	**Response in specific development**	8	5	2	2
Others	**BI, Solutions add-on, Best of breed, other tools, etc...**	10	8	5	5
NC	**No response, functionality not covered**	-25	-5	0	0

Comments

- **General questions:** Any of the four bidders support disconnected mode; no other notable differences identified.
- **Procure to Pay:** No major gaps versus requirements, except Microsoft, which does not allow updating an invoice's accountant information directly (change must be processed via the PO). All other requirements are covered. Watchpoint: Oracle NetSuite may require multiple add-ons/modules to cover the full scope (e.g., SuiteApps, SuiteFlow, SuiteScript).
- **Forecast to plan:** Responses are aligned across bidders.
- **Acquire to dispose:** Microsoft does not support intercompany asset transfers. Oracle NetSuite requires specific customization to track fixed assets budget vs. spend.
- **Record To Report:** Oracle NetSuite does not support "analytics-only" postings to isolate entries with no GL impact. Sage Group does not automate monthly interest accrual for loan transactions.
- **Technical response:** With the exception of SAP, no bidder accepts installing the Abivax Zscaler component. Microsoft and Sage do not accept the use of a bastion host. Sage also raised significant concerns regarding Abivax's ownership/control of the solution.
- **Middleware:** Answers aligned
- **E-invoicing:** Answers aligned
- **Business Inteligence:** Answers aligned

General questions: main processes not covered natively

NC = Not covered	Others	SD = Specific development

Editor	Requirements	Coverage level	Description
SAP	The system must allow working in “connected" or "disconnected” mode with data synchronization mechanisms	NC	N/A
	[SoX] The workflow tool or the system for automatically triggering business rules can be applied to all business objects in the database	SD	Many flexible workflows or validation rules are available in the standard but not for all business objects. For objects without workflow, custom enhancement must be performed.
Netsuite	The system must allow working in “connected" or "disconnected” mode with data synchronization mechanisms	Others	NetSuite operates as a cloud-first ERP therefore real-time online connectivity is required for transactions.
	[SoX] The tool manages approval and delegation of rights	SD	NetSuite's SuiteFlow workflow engine and access management features enable robust approval routing. Delegation of permissions, access rights, or approval authority for an interim period of time is not supported natively; but can be achieved either through the creation of a custom role or custom workflow.
	The tool provides a view of each process, if one exists, and a link with the process documentation (attached procedure, for example)	SD	NetSuite can centralize a process catalogue using a custom record (one entry per business process) capturing status, owner, and a link to documentation. Procedures can be stored in the File Cabinet and attached or linked (URL) for direct access from the process view. If automated via SuiteFlow, the related workflow diagram/history can also be referenced for end-to-end visibility.
	The tool allows alerts to be distributed by email (Outlook compatible, etc...)	Others	A suite app is required for bidirectional
Microsoft	The system must allow working in “connected" or "disconnected” mode with data synchronization mechanisms	NC	N/A
	[SoX] The system allows to manage access rights to different data by user profile and by entity	SD	XDS is the record-level security tool in D365 FO, allowing you to control data visibility in a fine-grained, dynamic, and robust way — particularly useful in SOX-compliant, GDPR-sensitive, or multi-company environments.
Sage	The system must allow working in “connected" or "disconnected” mode with data synchronization mechanisms	NC	Sage X3 only works on a connected mode.
	The tool offers a search engine that can be configured by user group and is accessible at all levels of the application	SD	The tools offers some features to run some research (line below, or even thanks to some query or BI). We need to better understand your requirement to be sure that we will fit with your needs.

P2P: main processes not covered natively

NC = Not covered	Others	SD = Specific development

Editor	Requirements	Coverage level	Description
SAP	[SoX] Ability to connect the ERP system with Trustpair to ensure banking information check	SD	SAP Integration Suite connects to Trustpair API Validation is done in supplier master workflow.
	In case of a purchase request without a defined supplier transformed into a purchase order, trigger a workflow to create the supplier	SD	SAP does not create suppliers automatically in core (SoX risk). But: PR → PO creation triggers then, SAP Build Process Automation launches: Supplier onboarding request → BP creation workflow
	Create an interface with the TMS solution to send the payment information	SD	SAP supports outbound integration to a TMS to transmit payment information using standard interface capabilities with configuration and mapping required to align with client's TMS banking processes
Sage	Ability to check that a supplier has not already been created (automatic reconciliation via SIRET, intracom VAT code, D&B number, etc.)	SD	This system allow to research with all the field of the supplier. The user will be able to check if the supplier already exist. An adaptation will be required if you want to automate the verification process
	Ability to change approver with comment	SD	In standard it is possible to configure some delegation for each workflow and for a dedicated period. If it not enough a adaption will be required
	Ability to record a credit note related to a purchase order and have the purchase order position reopenned automatically	SD	In standard if you want to reopened the order you need to create a return flow. This feature is not available direly on the credit not function.

P2P: main processes not covered natively

NC = Not covered	Others	SD = Specific development

Editor	Requirements	Coverage level	Description
Netsuite	Ability to automatically retrieve information on amount available on each currency (hedging)	SD	NetSuite does not natively manage FX hedging. Integration with TMS required.
	[SoX] Ability to connect the ERP system with Trustpair to ensure banking information check	SD	Integration via SuiteTalk REST API or middleware (NSIP- NetSuite integrator platform)
	Ability to enter contract information for the supplier: dates, prices	SD	NetSuite can capture supplier contract metadata (start/end dates, pricing conditions, key terms) using custom fields and/or a dedicated custom “Supplier Contract” record linked to the vendor and items/services. This enables controlled maintenance, approvals (SuiteFlow) and reporting. If the customer expects full contract lifecycle management (versioning, clauses, obligations, renewals workflows), a specialized CLM/SRM solution can be integrated while NetSuite remains the financial system of record.. Blanket POs can serve as simplified contracts.
	Ability to indicate on supplier card that there is a non-conformity managed	Others	With the NetSuite Quality Management SuiteApp, nonconformances and related quality events can be recorded and linked to items, lots/serials and receiving/production transactions. Vendor quality compliance reporting can be used to identify suppliers with recurring issues, and a vendor-level flag/status can be surfaced via a saved search/KPI or custom field fed by Quality Management data to indicate open/active nonconformances.
	In case of a purchase request without a defined supplier transformed into a purchase order, trigger a workflow to create the supplier	SD	NetSuite does not automatically create a supplier as part of PR-to-PO conversion by default. If a “missing vendor” condition must trigger a controlled supplier onboarding process, this is typically implemented with a specific workflow and governance controls (SuiteFlow and, if required, SuiteScript) to initiate vendor creation/approval before the PO can be finalized.
	Enter budget by purchase category and, if known, by supplier	SD	NetSuite supports budgeting and budget vs. actual reporting primarily by account and analytical dimensions (department/class/location/project). If budgets must be maintained and controlled specifically by purchase category and/or supplier, this typically requires a tailored data model (custom segments/records) and reporting/validation logic to align with the customer budgeting methodology.
	Ability to control the purchase request and return them even after acceptance	SD	Requisitions can be routed, approved, rejected/returned during the workflow. If the process requires “returning for correction” after an acceptance stage (e.g., re-opening an approved requisition with controlled re-approval), this is typically handled through specific workflow design (status management, revision controls, re-approval triggers) to maintain auditability.
	To ensure that no purchase request can be edited with a date in the past or with the today’s date, or with a quantity = 0	SD	This type of rule (date constraints and quantity validations) is enforced via specific validation logic (workflow validation and/or SuiteScript). The solution prevents saving/submitting non-compliant requisitions and maintains traceability of exceptions (if any) for internal controls.

P2P: main processes not covered natively

NC = Not covered	Others	SD = Specific development

Editor	Requirements	Coverage level	Description
Netsuite	Ability to modify the price on some article after the reception of the purchase order, to be considered with a threshold	SD	NetSuite supports 3-way matching (PO / Receipt / Vendor Bill) to detect and control price variances after goods receipt. If the supplier invoice price differs from the PO price, the variance is identified and the invoice can be routed for review/approval and/or placed on payment hold until resolved, with full audit trail (System Notes). If the customer requires an automated threshold rule (e.g., auto-accept within X% / hard-stop and approval required above X%), this can be implemented through specific workflow validation logic (SuiteFlow and, if needed, SuiteScript) to enforce the tolerance consistently.
	Ability to keep the comment during the escalation phasis (big orders)	SD	NetSuite can retain approver context during escalations provided the comment is stored on the transaction (standard memo/custom field). This is typically ensured via SuiteFlow by capturing a mandatory approval comment at each step and writing it to a controlled field that remains visible to subsequent approvers during escalation. Workflow history and System Notes provide full traceability of approvals and related comments.
	Ability to place a delegation with options	SD	If delegation requires business rules and options (e.g., date range, scope by subsidiary/type of purchase/amount, delegate vs. alternate approver), this is generally handled through a specific workflow design and configuration, potentially with a custom “delegation” setup record. The solution ensures controlled delegation, notifications, and full auditability of who approved on behalf of whom and when.
	Ability to approve an order when somebody is absent, writing a ticket takes too much time	SD	NetSuite can support absence handling by implementing a controlled delegation/alternate approver mechanism in SuiteFlow (e.g., delegate approver by date range, scope, and rules). This avoids manual ticketing by automatically rerouting approvals when the primary approver is unavailable. The delegation setup and all approvals remain fully auditable (who approved on behalf of whom, when, and why) via workflow logs and System Notes. More advanced rules may require SuiteScript.
	Ability to build an aging list according to the invoicing terms described in the contract	SD	Standard vendor aging is based on invoice due dates and payment terms. If the requirement is to build an aging list driven by contract-specific invoicing terms (e.g., milestones, billing schedules, contract-defined due logic), NetSuite can support this via a dedicated contract record (standard/custom) storing the terms and a specific report/saved search (and possibly workflow logic) to calculate aging according to those contract rules.
	Ability to select the VAT/GST regime applicable (shoud be automatically retrieved from the vendor info + order incoterm, but should also be modifiable)	SD	NetSuite supports purchase tax determination through tax configuration (tax codes/groups, vendor tax attributes, nexus/ship-to rules). However, using Incoterms as a driver for automatic VAT/GST regime selection is not standard logic in all localizations. If Incoterm must influence the proposed tax regime with user override (with controls/audit), this is typically implemented through specific configuration and validation (SuiteFlow and, if needed, SuiteScript). Authorized users can override tax codes with full audit trail.

P2P: main processes not covered natively

NC = Not covered	Others	SD = Specific development

Editor	Requirements	Coverage level	Description
Netsuite	[SoX] Ability to receive and integrate the prepayment invoice (scan, OCR, manual)	Others	Manual entry of prepayment invoices is supported natively in NetSuite. For scan/OCR capture, NetSuite requires an AP automation/OCR solution (SuiteApp or integrated tool). Once captured, the prepayment invoice/prepayment transaction is created in NetSuite and can follow approval controls and audit trail (System Notes) to meet SOX requirements.
	[SoX] Integrate invoices received by different channels (paper, PDF, Factur-X) and integrates it in the system via scanning, OCR, invoicing or manually	Others	NetSuite supports vendor bill processing natively, but invoice scanning/OCR and multi-channel capture (paper/PDF/Factur-X) requires an AP automation/OCR solution (SuiteApp or best-of-breed) integrated with NetSuite. Once captured, invoices are created in NetSuite and can follow approval/matching controls with full SOX audit trail.
	Ability to connect to the specific platform for e-invoincing French regulation in order to receive invoices in compliant format	Others	NetSuite supports e-invoicing through its native e-document capabilities and the NetSuite Electronic Business (NSEB) / Oracle Business Network connectivity, which can send/receive electronic documents via Avalara and its networks. Avalara is listed by the French tax authorities as an approved/registered platform (PA/PDP). The compliant French flow therefore relies on enabling the NetSuite e-invoicing solution together with the Avalara platform for routing and lifecycle status exchanges, while NetSuite remains the system of record for accounting and audit trail.
	Ability to send the invoice lifecycle information to the approved platform by French regulation for e-invocing	Others	NetSuite supports exchanging e-invoicing lifecycle statuses through its e-document framework together with Oracle Business Network connectivity. Using the NetSuite Electronic Business (NSEB) SuiteApp, NetSuite can send and receive electronic documents and related status updates through Avalara and its integrated networks/platforms; these statuses can be stored and tracked in NetSuite for audit and reconciliation. Avalara is listed by the French tax authorities as an immatriculated platform for the French e-invoicing reform, therefore the compliant lifecycle exchange relies on enabling the NetSuite e-invoicing solution with the Avalara connection and mapping the required French lifecycle events.
	Ability to record / integrate purchase credit notes from the vendor and integrate them in the accounting (scan and integration in the system)	Others	NetSuite supports recording Vendor Credits natively (manual entry and application). If credit notes must be captured from paper/PDF via scanning/OCR and integrated automatically, an AP automation/OCR solution (SuiteApp/best-of-breed) is typically required; once captured, the Vendor Credit is created in NetSuite with standard posting and audit trail.
	Ability to record a credit note related to a purchase order and have the purchase order position reopenned automatically	SD	NetSuite supports vendor credits related to PO-based purchasing and allows reopening PO lines manually when required. If the business requires automatic re-opening of a PO line/position upon posting a related vendor credit (based on defined rules), this typically requires script

P2P: main processes not covered natively

NC = Not covered	Others	SD = Specific development

Editor	Requirements	Coverage level	Description
Netsuite	Ability to integrate data from Travel & Expenses SAP Concur	Others	Concur integration is typically delivered via a connector/iPaaS or integration layer. Expense reports (employees, cost allocation, taxes, attachments where applicable) are imported into NetSuite and posted according to NetSuite accounting and analytical dimensions, with appropriate controls and audit trail.
	Create an interface with the TMS solution to send the payment information	SD	Integration with a Treasury Management System (TMS) is supported via APIs (SuiteTalk/REST), file exports (CSV/SFTP) and/or an iPaaS.
	Ability to set up warnings: IBAN reference with the wrong digit numb … (through interface with Trustpair)	Others	NetSuite can enforce bank detail validations by implementing controlled checks and warnings on vendor bank fields. For bank-grade verification (including check digit validation and fraud-oriented controls), integration with Trustpair can be used to validate IBANs and store a validation status/result on the vendor record. Alerts/workflows can warn or block payment processing when bank details are invalid or unverified, with full audit trail.
	Post payment entries through interface with TMS: automatic application / reconciliation with invoices / purchase ordertential credit memos + gain/loss entries generation (reverse of unrealized gain / loss entries if any), throught the clearing accounts cf "GL & Interco management process"	SD	NetSuite supports vendor payments with automatic application to open invoices and vendor credits when the payment transaction is created/recorded in NetSuite. It also supports payment posting through bank/clearing accounts and calculates realized FX gain/loss at settlement for multi-currency payments. Unrealized FX is handled through standard currency revaluation processes. If payments are executed in a Treasury Management System (TMS), an interface is required to export payment instructions and import execution statuses/bank references back into NetSuite so that payments can be created/updated and applied consistently, and reconciliation can be supported via bank statement import/matching. The level of automation (auto-application and auto-matching) depends on available references and the TMS/bank integration design.
	Need to comply with French and US legal requirements for reporting contractor and fee payments, including the annual submission of specific reports to tax authorities, and considered how the ERP could support these processes.	Others	NetSuite can provide the underlying payment data (vendors, amounts, dates, tax IDs) via reporting and exports, however statutory e-filing typically relies on country-specific solutions/providers. For the US, NetSuite does not natively generate 1099-MISC forms and instead provides saved-search based reporting to third-party providers (e.g., Yearli/Greatland, Sovos, etc.). For France, statutory contractor/fee declarations usually require localization-specific reporting and/or an external compliance provider, with NetSuite acting as the system of record and data source.

P2P: main processes not covered natively

NC = Not covered	Others	SD = Specific development

Editor	Requirements	Coverage level	Description
Microsoft	[SoX] Ability to connect the ERP system with Trustpair to ensure banking information check	SD	Webservice to develop in order to connect with Trustpair.
	Ability to indicate on supplier card that there is a non conformity managed	SD	There is no indication about in progress non conformity but a flag could be simply added.
	Ability to create a purchase request without identified vendor	SD	D365 FO allows you to manage suppliers in the SRM with limited information.
	In case of a purchase request without a defined supplier transformed into a purchase order, trigger a workflow to create the supplier	SD	
	To ensure that no purchase request can be edited with a date in the past or with the today's date, or with a quantity = 0	SD	Control to add
	[SoX] Integrate invoices received by different channels (paper, PDF, Factur-X) and integrates it in the system via scanning, OCR, invoicing or manually	Others	D365 FO has a native scanning system in D365 FO but it does not managed the pooling. We recommend to use the compliant ISV exFlow from SignUp.
	Invoices should be automatically blocked for payment until it has been authorised	Others	NSI Foundation for payment approval or ISV Ex Flow for vendor payment approval
	When integrating the invoice and generating it from the related purchase order or purchase receipt, the accounting department should have the possibility to adjust it: G/L Account, analytical information, exchange rates, …	NC	Not possible. The invoice takes the information from PO. So if you want to change analytics or GL accounts, you must change the PO before posting the invoice.
	Create an interface with the TMS solution to send the payment information	SD	
	Ability to set up warnings: IBAN reference with the wrong digit numb … (through interface with Trustpair)	SD	ERP checks if IBAN or SWIFT has been setup but no connection with Truspair
	Post payment entries through interface with TMS: automatic application / reconciliation with invoices / purchase ordertential credit memos + gain/loss entries generation (reverse of unrealized gain / loss entries if any), throught the clearing accounts cf "GL & Interco management process"	SD	Interface with TMS to develop but all accounting functionalities are standard (reconciliation with invoice, gain + loss entries or reverse unrealized gain/loss entries if any)

F2P: main processes not covered natively

NC = Not covered	Others	SD = Specific development

Editor	Requirements	Coverage level	Description
Netsuite	Possibility to support multi-year planning in the ERP	Others	NetSuite standard budgets are fiscal-year based. For advanced multi-year planning (scenario modelling, rolling forecasts, driver-based planning), NetSuite typically relies on a dedicated planning tool (e.g., Workday Adaptive/Workiva as the planning system, or NetSuite Planning and Budgeting as an add-on), with approved versions loaded back into NetSuite for budget vs actual reporting.

A2D: main processes not covered natively

NC = Not covered	Others	SD = Specific development

Editor	Requirements	Coverage level	Description
Netsuite	All fixed asset cards must be linked to a cost center by default and amortization can either be booked on a cost center or a project (FA card analytical dimension can be different from its amortization dimension)	SD	FAM supports default analytical allocation on the asset record and uses it for depreciation postings. If the requirement is to link the asset to a default cost center while posting depreciation to a different dimension (e.g., project), this requires a specific design (additional fields/segments and posting logic/workflow, potentially custom GL mapping) to ensure consistent and auditable postings.
	Ability to upload budget lines by type of fixed asset / site / BU / BL in the ERP at the begining of the year	SD	NetSuite standard budgeting is fiscal-year based and supports uploading budget lines by G/L account and standard classification dimensions such as Department / Class / Location (and by period/month allocation). Budgeting “by fixed asset type” is not a native budget dimension; to meet this requirement using standard budgets, the fixed-asset categories are represented through the CapEx account structure (e.g., dedicated CapEx/asset acquisition accounts per asset category) and site/BU/BL are mapped to Location/Department/Class. Annual budget lines can then be loaded at the beginning of the year via standard import (CSV) and used for budget vs actual reporting.
	[SoX] Ability to follow up on the fixed assets spendings engaged, invoiced and payed vs yearly budget at all times	SD	A consolidated view of CapEx spend engaged (PO commitments), invoiced and paid versus annual budget typically requires tailored reporting that combines procurement commitments, AP/payments and standard budget dimensions (account + Dept/Class/Location), delivered via SuiteAnalytics/Saved Searches and dashboards with auditability.
Microsoft	Ability to transfer assets: transfer of responsibilities, need to know how the asset is deployed between companies	NC	Fixed asset is defined per company and belonged to a specific company.
	Provide the number of standard reports delivered with your solution, along with a detailed list and description of each report (scope, main KPIs, underlying data, and target users).	Others	Power BI regarding KPI

R2R: main processes not covered natively

NC = Not covered	Others	SD = Specific development

Editor	Requirements	Coverage level	Description
Netsuite	Process central payments, fixed assets & IC settlements	SD	NetSuite OneWorld supports intercompany processing and settlements and Fixed Assets Management. “Central payments” (one entity paying on behalf of others) is supported through an intercompany AP design (clearing/intercompany balancing and settlement rules), which typically requires a defined process model and configuration aligned to the group policy and audit requirements.
	Accrue interest each month automatically for any loan transaction	SD	Monthly interest accruals can be automated using recurring/memorized journal entries and/or schedules. If interest must be calculated dynamically from loan terms (principal balance, variable rate, effective interest method, etc.), this typically requires a specific calculation approach (configured model and/or integration with a treasury/loan tool) with controlled postings and audit trail.
	Ability to prepare statutory filings & reporting	Others	NetSuite provides the accounting data, tax detail and statutory reports required for filings. Automated statutory e-filing/submission (by country) typically relies on localization packs and/or compliance partners; NetSuite remains the system of record and provides audited extracts for submission.
	Ability to prepare shareholder reporting & manage investor relations	Others	NetSuite provides shareholder-ready financial statements and controlled disclosure data extracts, but investor relations management (IR communications, cap table/IR workflows) is usually handled in dedicated tools. NetSuite outputs can feed the IR process via reporting and exports.
	Ability to prepare regulatory reporting	Others	NetSuite can produce regulatory reporting extracts and financial statements with audit trail. Where regulation requires specific electronic formats, portals or submissions, this is typically addressed via localization and/or a partner compliance solution, using NetSuite as the source system.
	Monthly accounting reconciliations with bank statement, as automatic as possible: bank statements will come from the TMS which will ensure the banking connectivity	SD	NetSuite supports bank reconciliation from bank statement imports, but if statements “come from the TMS” and also provide banking connectivity, an integration is required to import statements/statuses into NetSuite in the required format and automate reconciliation as far as possible.
	Ability to isolate analytical entries in a separated journal or in separated accounts	NC	NetSuite does not support “analytics-only” postings without GL impact; analytical dimensions are carried on accounting lines. Analytical reallocations can be isolated by using a dedicated allocation/reclass Journal Entry form/type and posting net-zero reallocations (e.g., debit/credit the same G/L account with different department/class/location/project values, or via an allocation clearing account). This enables separate tracking and reporting of analytical reallocation entries versus operational postings.
	On each level of reallocation, have the possiblity to input some combination restrictions and rules	SD	NetSuite allows you to set up allocation schedules with combination restrictions and rules at each level of reallocation. You can define allocation methods, assign specific criteria or filters (such as departments, locations, accounts, or custom segments), and apply rules to control how amounts are distributed across different dimensions. Highly advanced or conditional allocation logic might require additional customization or scripting.

R2R: main processes not covered natively

NC = Not covered	Others	SD = Specific development

Editor	Requirements	Coverage level	Description
Microsoft	Monthly accounting reconciliations with bank statement, as automatic as possible: bank statements will come from the TMS which will ensure the banking connectivity	SD	Interface with TMS to develop. CAMT053 or MT940 files are allowed.
Sage	Accrue interest each month automatically for any loan transaction	NC	Interest is calculated outside Sage X3. The related accounting entries can be generated automatically when the interest appears on bank statements through the advanced bank statements function.

Technical response: main processes not covered natively

NC = Not covered	Others	SD = Specific development

Editor	Requirements	Coverage level	Description
Netsuite	When managing interfaces, the system must be automatic and self-correcting, with minimal operating costs, it must be possible to suspend and start interfaces individually. Specify any limits.	SD	NetSuite interfaces can be restricted for individual applications but not stopped entirely. Self-correction would be built programmatically during implementation.
	Ability to install our own Zscaler ZPA App Connector on the private cloud	NC	Not applicable. NetSuite is delivered as a multi-tenant SaaS solution on Oracle Cloud Infrastructure and does not permit direct installation of third-party agents like Zscaler ZPA App Connectors within its environment.
	Support integration with existing SOC or SIEM systems is required.	Others	NetSuite does not provide direct access or connectivity to our internal SIEM infrastructure. Within the NetSuite application UI, users can create Login and Audit Logs Saved Searches to view detailed reports of logs with desired attributes. Depending upon the user's role, the Saved Searches can be exported to CSV, PDF, or Excel formats. Users also have the option to send saved search results via email (to necessary recipients) either according to a regular schedule or as alerts triggered by record adds or updates, or both. Users can include search results embedded in messages or as attached .csv or .xls files. Users may utilize the exported files for their security monitoring tools in accordance to their company's policies.
	The Service Provider's main support/maintenance department is located in France or in a European Union country excluding the United Kingdom, in order to ensure that any incidents or faults occurring on Abivax are dealt with in accordance with the RGPD.	Others	We use a "follow-the-sun" approach to provide global support coverage, resources based in North America, Asia, and Europe are assigned to our customer, partner and developer install base, all of whom are dedicated to providing full-time support. For more information on NetSuite Service and Support options, visit http://www.netsuite.com/portal/services/support-services.shtml.
	Subsequent sub-contractors may only be used with the express prior written authorisation of the data controller.	Others	We use in-account notifications to advise you if we need to involve a new third-party sub-contractor or sub-processor. As part of our Data Processing Agreement, you may, within 14 days, object to the intended involvement of a third-party sub-processor or Oracle Affiliate, providing objective justifiable grounds related to their ability to adequately protect personal data in accordance with our Data Processing Agreement or Applicable Data Protection Law. This may be submitted in writing as a service request via our online support tool.
	Be able to ensure data request response times of 3 seconds for initializing a request of 1000 records and 10 seconds to display results	Others	We cannot commit to a response time, response times can vary, dependent on such things as customization and user connectivity. You can view the Application Server, Public Network, and Client response times within the application by double clicking on the NetSuite Logo on any page.

Technical response: main processes not covered natively

NC = Not covered	Others	SD = Specific development

Editor	Requirements	Coverage level	Description
Microsoft	Ability to interoperate with existing application solutions, with accessibility in "connected/disconnected" mode and automatic daily synchronization	NC	D365FO is a cloud SaaS, meaning it doesn't work in disconnected mode. However the bandwidth required to work properly is very low
	When managing interfaces, the system must be automatic and self-correcting, with minimal operating costs, it must be possible to suspend and start interfaces individually. Specify any limits.	SD	Interfaces will be developped and automated as much as possible. As an option, there is a third party application "EDI Studio" that allows you to setup and monitor interfaces out of the box.
	Include alerting mechanisms for critical events and thresholds	Others	An out-of-the-box system allows you to send telemetry events to an Azure Application Insight resource. Afterwards, you can determine yourself the event, categories and tresholds you would like to monitor and be alerted for. Azure includes large amount of alerting features
	Use of a bastion host to access managed resources? If so, what type of authentication is used?	NC	D365 FO is not concerned with Bastion system. It's fully web-based
	Ability to install our own Zscaler ZPA App Connector on the private cloud	NC	No, Microsoft fully controls the underlying infrastructure and does not allow third-party virtual machines or agents to be deployed inside the managed service

Technical response: main processes not covered natively

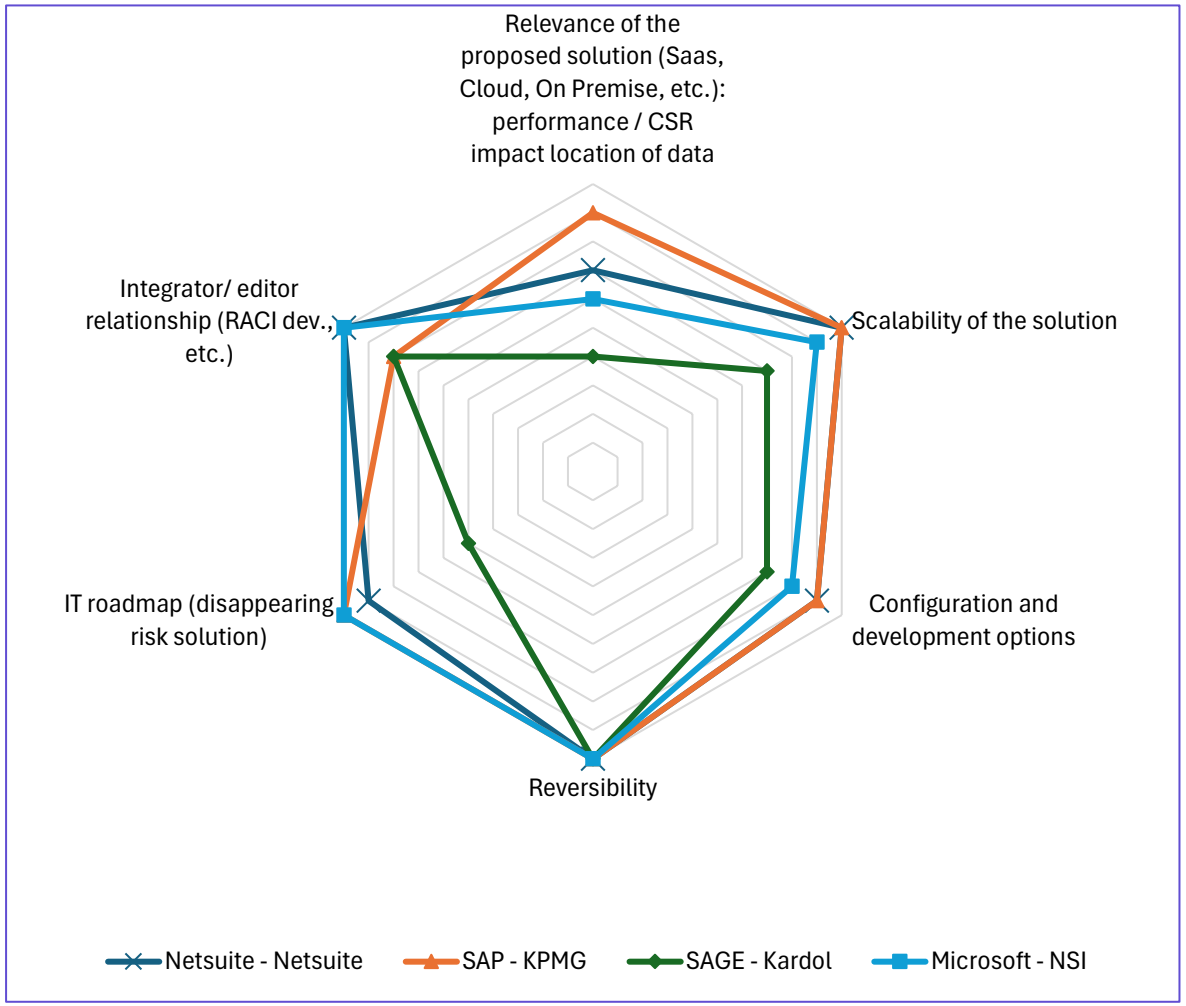
NC = Not covered	Others	SD = Specific development

Editor	Requirements	Coverage level	Description
Sage	Ability to generate and send a daily operational report including system availability status for key modules and interfaces, incident logs, and any relevant operational alerts.	Others	With the optional monitoring addon : Sage X3 Sentinel.
	Ability to interoperate with existing application solutions, with accessibility in "connected/disconnected" mode and automatic daily synchronization	NC	No OFFLINE mode.
	Ability to integrate with Microsoft 365 and provide compatibility with OneDrive/Sharepoint for file storage and sharing	Others	Sage X3 has a built in addons with Microsoft Excel, Word and Outlook (offline versions). No direct integration with SharePoint.
	Specify average loading time for a screen and longer processes (list of processes, maximum time, loading of pages consulted)	Others	We don't provide average loading times. But we monitor performance closely, make sure the infrastructure in place is in keeping with the required usage.
	Give details of the solution's performance: page display time, longer processing times and maximum response times, etc.	Others	We are appying a best effort strategy. Performance is important and Sage does their best to provide an efficient platform. Sage X3 is built on a robust platform, and is compatible with high volumetry implementations.
	Provide dashboards for system health, performance metrics, and resource utilization.	Others	Yes with the optional advanced monitoring module Sage X3 Sentinel.
	Administrators must have tools for data backup, restore, and archiving	NC	Data backup and restore handled by Sage and/or integration partner.
	Use of a bastion host to access managed resources? If so, what type of authentication is used?	NC	We do not use a bastion host.
	Ability to install our own Zscaler ZPA App Connector on the private cloud	NC	Not possible.
	Support integration with existing SOC or SIEM systems is required.	NC	Sage use their own SIEM system. No integration possible with external systems.
	The tool makes it possible to control the collection of consent	NC	Collection of consent needs to be carried out outside the application
	Ability to implement a business recovery plan on a geographically distinct site for all locations	NC	DRP is for the whole solution.

Appendix
Relevance of the solution details

03

Zoom on technical solution's relevance



Comments

- **Relevance of the proposed solution:** Sage proposed a private-cloud setup, while the other vendors proposed public-cloud deployments. Microsoft did not present a best-of-breed approach, and NetSuite's e-invoicing capability is not yet available on the platform. All proposals meet the required certifications, are SOX compliant, and offer hosting in an EU region.
- **Scalability of the solution:** All solutions are scalable, although Sage X3 appears slightly less designed for scalability.
- **Configuration and development options:** As with scalability, all solutions are designed to support configuration and custom development effectively; however, Sage X3 is somewhat more constrained relative to the other options.
- **Reversibility:** No critical informations
- **IT Roadmap:** SAP, NetSuite, and Microsoft appear the most advanced in terms of IT strategy and AI roadmap maturity.
- **Integrator/editor relationship:** NetSuite (editor/vendor) and NSI (ranked #1 award-winning integrator in 2025) demonstrate the strongest working relationship. Close behind, KPMG and Kardol are established, close partners of their respective software editors/vendors.

Appendix
Integrator's approach details

04

Zoom on integrator approach

Comments

- **Project approach:** The overall delivery approaches are broadly similar. However, we flagged two points: NetSuite + NSI did not allocate enough post–go-live days, and NetSuite + KPMG proposed project management effort that was, respectively, too low and too high.
- **Integration complexity:** All solutions are designed to integrate smoothly, except Sage, which is the only option requiring an external middleware layer.
- **Planning:** Timelines are largely comparable, with no major differentiators. The only notable point is the 6-week hypercare(not enough) window proposed for NetSuite and Microsoft.
- **References:** KPMG provided no biotech-specific references, and NSI's references were not sufficiently accurate. NetSuite presented the most robust and convincing references overall.
- **Financial Health of the service provider:** KPMG (France) and NetSuite appear the strongest financially. Next is NSI, supported by a solid international group. Kardol comes last, while still being a solid French integrator.
- **Project Team:** Across all proposals, there is a lack of detail regarding the project team setup (roles, seniority, allocation). The only standout point is KPMG's offshore delivery model in Tunisia.
- **TMA&Support:** Pricing was built on the same baseline assumptions across vendors. We still need clarification on TMA/support operating hours and time zone coverage.
- **Project Tools:** All providers rely on robust project tooling. Minor caution for Sage, as the proposal references an internal tool that may introduce limitations versus market-standard tooling.
