CFGI

ABIVAX

NetSuite local “PMO & Change” proposal

March17, 2026

OUR UNDERSTANDING

Abivax is a Paris-headquartered, Nasdaq- and Euronext-listed biotechnology company developing first-in-class therapeutics for chronic inflammatory diseases. Its lead asset, Obefazimod (ABX464), is in late-stage clinical development for ulcerative colitis and Crohn's disease, with Phase 3 topline data and a U.S. NDA filing both anticipated in 2026; placing 2027 on a potential commercial launch trajectory. Operating across France and the United States, with research operations in Montpellier, Abivax is navigating the demanding transition from a clinical-stage organization to a fully scaled, commercial-ready enterprise. That transition puts extraordinary demands on the finance function: the systems, controls, and processes required to support a biotech filing with regulators are materially different from those required to run a global commercial operation.

Key Areas of Need

As part of its NetSuite implementation program, Abivax is seeking a Paris based partner to help the group project manager on the following aspects : Local support on project management, change, and functional support.

- A partner who already knows the business: CFGI brings existing familiarity with Abivax's operations, team, and context (thanks to the ongoing SOX project), which meaningfully **compresses the discovery and ramp-up time** that any new implementation partner would require.

- Transatlantic delivery capability: With relationships and resources in both France and the United States, CFGI is positioned to support a genuinely **bilingual, bicultural support in a way that matters for a dual-listed**, dual-jurisdiction organization running English and French operations simultaneously.

- A long-term relationship, not a transaction: We view this engagement as another commitment in building something sustainable with Abivax.

PROPOSED APPROACH AND DELIVERABLES

Objectifs

- Ensure that teams are fully included in the co-construction of the target solutions
- Manage and mitigate project risks
- Ensure proper integration and adoption of target actions and recommendations by the teams to secure project success and effective implementation
- Ensure that teams clearly understand the objectives of the engagement

Key success factors

- **Place people at the heart of the project design**
- **Leverage our knowledge of stakeholders and processes.**
- Actively listen to feedback and incorporate relevant initiatives to support the co-construction of target solutions
- Identify potential roadblocks as early as possible

Proposed Approach

Working closely with the project Director (Mike) on :

1- Engagement scoping :

- Presentation of the engagement and its objectives
- Organization of a kick-off meeting at the start of the engagement to finalize the engagement timeline, validate the methodology, engage and motivate the teams. The CFGI consultant prepares content, facilitates the meeting, and drafts the minutes.

2- Preparing steering/governance forums:

- Production of steering materials enabling the program leadership to monitor workstream progress. In a concise flash-report format, these materials document completed actions, upcoming activities, risks to be managed, and items to escalate for management decision.
- Ad-hoc informal reporting (e.g., check-in calls) to the program leadership as needed.
- Active participation in governance/steering forums.

3- Business process analyst

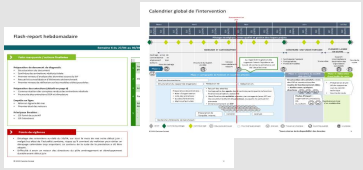
- Assist in documentation process specific requirements
- Advice development team on eventual gaps when customization is needed
- Assess end to end transaction flow and interdependencies across process areas

4- Change Management:

- Interviews : Understand user needs; identify positive experiences, pain points, and opportunities. Provide to the project manager accurate and constructive feedback.
- Change Management Strategy : Help on define the change management strategy to maximize stakeholder buy-in. By project phase and stakeholder group, identify the actions to be implemented, the timeline, the parties to engage, and the logistics.
- Communication Plan : Based on all changes identified during the previously conducted workshops and in line with the change strategy and the defined deployment roadmap—and informed by the results of the impact-analysis exercise—develop a communication plan tailored to all scopes.

Deliverables

- **Kick-off decks and contribution to meetings**
- **Weekly PMO updates.**
- **Contributions to business and functional requirements**
- **Change management meetings and communications.**



APPROACH DETAILS AND ILLUSTRATIONS (1/2)

Change Management Approach

	« Employee Voice » Interviews	Change Management Plan	Communication Plan
What ?			
Why ?	Understand the **needs of process users** from an employee-experience perspective; identify **positive experiences, pain points, and opportunities** in order to design a future-state environment that meets their expectations.	The definition of the **change-management strategy** aims to maximize **stakeholder buy-in**. It will be important to support employees, managers, and process owners throughout their evolution and in their technical and functional adoption of the processes.	Based on all the changes identified during the previously conducted workshops — and in line with **the change strategy** and the **defined deployment roadmap,** and informed by the results of the impact-analysis exercise (operability, ease of deployment of the new processes) — **develop a communication plan** tailored to all scopes.
How ?	Interviews based on the "**Employee Experience / Design Thinking"** methodology, targeting not only team members but also employees and managers. The strategic challenges of the project requiring support will be identified.	Define, based on the project phases and the identified stakeholder groups, the **various actions to be implemented** (mobilization, engagement), the timeline for these actions, **the stakeholders to be involved**, and the logistics required for their execution.	With a communication plan and in line with the different deployment stages, **the right people will be informed at the right time**, with the appropriate message, using the most relevant communication channel.

Change-management communication plan and example of impact analysis by stakeholder group

APPROACH DETAILS AND ILLUSTRATIONS (2/2)

Change Management Approach

Our change-management approach to ensure the success of the project

- **Talent must be placed at the heart of the project**
- **Start change-management activities immediately — design the target state with the accounting and operational teams, with a strong focus on people.**
- **Go beyond traditional change management by working on the target ways of working factoring SOX processes.**
- **Align the top management so that the target implementation is fully aligned at the highest level of the organization."**
- **Leverage the knowledge, ideas, and partnership of the various stakeholders.**
- **Proactively anticipate and design the retention plan.**
- **Communicate clearly and transparently with the individuals concerned.**

PROPOSED TEAM

PROPOSED TEAM

Transatlantic Team Combining Process Knowledge, Team Insight, and NetSuite Expertise

Jean Arnold Coutareau
Partner

~ 1 hour / Week

Shine Thomas
Partner, Technology Transformation

On demand

Walid Bouassida
Director

~ 1day / Week

Ken Schatz
Managing Director, Technology Transformation

On demand

Youness Tyamaz
Consultant

~ 2 days / Week

PROPOSED TEAM

Transatlantic Team Combining Local Process Knowledge and NetSuite Expertise

Jean Arnold Coutareau
Partner

Jean is the Managing Partner for CFGI in France. With 30 years of accounting and finance experience, Jean has deep knowledge in business transformation, complex accounting, international financial reporting, capital markets and transaction advisory in international environments.

Walid Bouassida
Director

Walid is a Director providing Financial & Accounting advisory and process optimization services to our clients in France. He has 16 years of accounting and consulting experience with public and private companies. He has led several complex projects in the retail, construction, logistics and services sectors.
Walid holds the French CPA diploma.

Walid has been working on Abivax SOX remediation since September 25.

Youness Tyamaz
Consultant

Youness is a Consultant at CFGI France. He brings strong experience in financial reporting and audit across international environments. Youness has developed expertise in IFRS, French GAAP, and US GAAP, supporting complex reporting processes, accounting integrations, and audit readiness for multinational groups.

Youness has been working on Abivax SOX remediation since December 25.

Rob Paugh
Partner, Technology Transformation

Shine brings over 20 years experience of experience working with companies in various industries and leading large transformation initiatives that cover the full breadth of finance processes. These initiatives included leading large Cloud ERP implementations as part of business-led technology transformations. Additionally, Shine also leads CFGI's ERP Practice.

Rob Paugh
Managing Director, Technology Transformation

Ken brings over 20 years of experience delivering value to clients through strategic finance transformation, technology enablement, and operational excellence. He is a proven leader with deep expertise in Enterprise Performance Management (EPM) and Enterprise Resource Planning (ERP) solutions, specializing in Oracle NetSuite, Oracle EPM, and Sage Intacct.

ESTIMATED FEE

COST AND TIMELINE ESTIMATE

Our philosophy is to provide quality and agile services for a competitive fee.
Our proposed fee estimate reflects our commitment to Abivax.

Our estimate, excluding VAT and expenses, is as follows:

Project	Est duration	Estimated fees
Local PMO and functional support	~35 weeks	70 - 90
Change		30 - 35
Total		**K€ 100 - 125**

Billing of our services, will be time-and-materials based, if at some point our total fee is expected to exceed the estimate we will promptly discuss with you. Our hourly rates will be aligned to our discounted SOX rates.

Fees above exclude on-demand support from our CFGI NetSuite experts. Their services will also be billed on a time-and-materials basis.

CFGI

OUR TECHNOLOGY PRACTICE

NetSuite Technology Services

Success hinges on having both the right technology and the right experts who can craft scalable, dependable processes. NetSuite is only as good as your ability to leverage it.

Our NetSuite Offerings

Implementation From initial discovery through go-live, we partner with you to understand your business and collaboratively deliver seamless, end-to-end NetSuite implementation solutions.

Optimization and Customization Your ERP should elevate and evolve with your business. We help tailor your system to enhance performance and ensure it supports your team, not the other way around.

Managed Services and Support Our Support team can act as your NetSuite Admin, on-demand developer, or support safety net; all for a fraction of the cost of adding dedicated internal headcount.

Advisory and Project Management We enhance your implementation with strategic guidance and expert project oversight rooted in industry leading practices.

Avg Increased Revenue Growth	Days reduced to complete annual budget	Improved IT Team Productivity

TECHNOLOGY TRANSFORMATION

CFGI helps your organization leverage technology by aligning it with the needs of your business. Our team is comprised of accounting and industry professionals who bring both digital and financial expertise to support our clients' most challenging technology needs. We place an emphasis on a process-focused approach that will drive and inform the strategic direction of your technology.

- Technology assessment, selection, and strategy
- Finance and accounting systems implementation and re-implementation
- ERP project management support
- Automation, including robotic process automation
- Intelligent document processing

ASSESS: *Evaluate and optimize* your technology capabilities and needs.

CFGI specializes in the execution of detailed technology assessments, which may include the following components:

- Technology Budget Optimization
- M&A Due Diligence
- Infrastructure Rationalization / Cloud Migration
- Product (Software Application) Rationalization
- Business Continuity & Disaster Recovery Planning
- Automation
- Infrastructure and architecture

SELECT: *Determine the right technology* for your business requirements.

- Business Requirements Definition :
  - *Future State Needs (To Be)*
  - *Current State Assessment (As Is)*
- Request for Information Management
- Request for Proposal Management
- Vendor Management
  - *Prepare 'Demo Script'*
  - *Schedule Vendor Meetings*
  - *Facilitate Vendor Demos*
- Vendor Selection Recommendation
- Vendor Contract Negotiation
- Leverage Partner Alliances

IMPLEMENT: *Implement technology solutions and ensure success* against your strategic goals.

- Business Process Mapping
  - *Future State Design (To Be)*
  - *Current State Mapping (As Is)*
- Best Practice Process Definition
- Chart of Accounts Redesign
- ERP End-to-End Implementation
- Agile Project Management / Phasing
- System Configuration
- Data Mapping / Integration
- Data Migration Strategy & Execution
- System Migration as Required (old instance to new or one platform to another)
- Perform & Facilitate Testing
- Change Management
- End User Training
- Go Live & Post Go Live Support

SUPPORT: *Actively support clients in their implementation initiatives.*

- Business Process Documentation
- Requirements Definition
- Testing Lead / Support
- Change Management Activities
- Training Facilitator / Coordination
- Communications (internal / external)
- Data Migration and Reconciliation
- Go Live & Post Go Live Support
- Status Reporting
- Issue Escalation and Resolution
- Program / Project Governance
- Project Documentation (compliance, audit reviews, controls)
